

# Business Social Software for High Performance Collaborative Project Working

## Why OpusView?

OpusView is a powerful end-to-end suite of enhanced tools designed to make working on any business project more effective. As a social framework, OpusView drives innovation, improvement, and transformation to successful outcomes. OpusView is a fully customizable digital environment for all users across the enterprise. For business initiatives, OpusView offers advanced approaches to coordinating and organizing group collaboration.

Designed as a complete and versatile business SaaS solution, OpusView harnesses and directs organizational assets into seamless activity. Groups, teams, and communities can visualize, socialize and mobilize around defined goals to share information, and work on opportunities and risks.

OpusView is the engine of corporate agility. It enables more purposeful team communication and accurate progress monitoring. It accelerates knowledge creation and transfer, refines decision-making, and aligns group and individual activity more closely with business strategy.

## Alignment with strategy

Ensuring group and individual activity is consistent at the business initiative level with objectives is crucial to achieving fast and stable corporate growth. Integrated into OpusView is the objectives and key results (OKR) methodology used increasingly by dynamic organizations to connect individual endeavour to the corporate plan.

## HIGHLIGHTS

**Reduces the start to finish time of business projects.**

**Develops closer working relationships between business and IT.**

**Organizes project groups and clarifies goals.**

**Promotes faster access to organizational talent.**

**Dissolves silos through project work.**

**Motivates higher creativity and productivity levels.**

**Creates a digital memory which can be recalled anytime.**

**Produces documentation for initiative execution.**

## Industry-agnostic, user-customizable

OpusView is industry-agnostic. Both business and technical audiences responsible for specific collaborative work plans can easily create their own interface to best model the organizational structure, work pathways, and human networks required to achieve a common goal.

A collaborative model is easy to create and easy to use. The user experience follows a no-nonsense approach that is as enjoyable and as frictionless as possible. The platform is highly visual and interactive, capable of supporting simple and complex requirements. Dashboards, visualizations, and event-driven analytics empower users from start to finish, delivering business initiatives more quickly.

Team creation, skill identification, knowledge sharing and work organization are just a few of the functions that can be integrated into an individual model. Workspaces and elements are underpinned by a logical schema which also embeds business objectives, key result targets, task allocation, and resource delineation.

## Speed matters

Disruptive change demands speed of response. OpusView can mobilize networks of people quickly by creating organizational transparency. Capabilities and resources can be surfaced or developed quickly and then harnessed in real-time.

Complex problems can be analyzed and solved collectively by coordinating diverse expertise around specific tasks. Trends can be anticipated, pre-emptive action taken, and competitive advantage won.

## Simplicity and sophistication

OpusView scales to every business demand and every user type. Whether the business initiative is large or small, simple or complex, OpusView provides business and technical users with all the flexibility they need to match the tool to the task. Custom templates will map to both a highly structured or more free-form approach, whichever best reflects the needs of the manager, group, or organizational culture.

**NEW TOOLING FOR THE  
DIGITAL ENTERPRISE**

**Powerful mix of social working,  
project management and  
real-time communications that  
maximizes the return on your  
teams and business projects.**

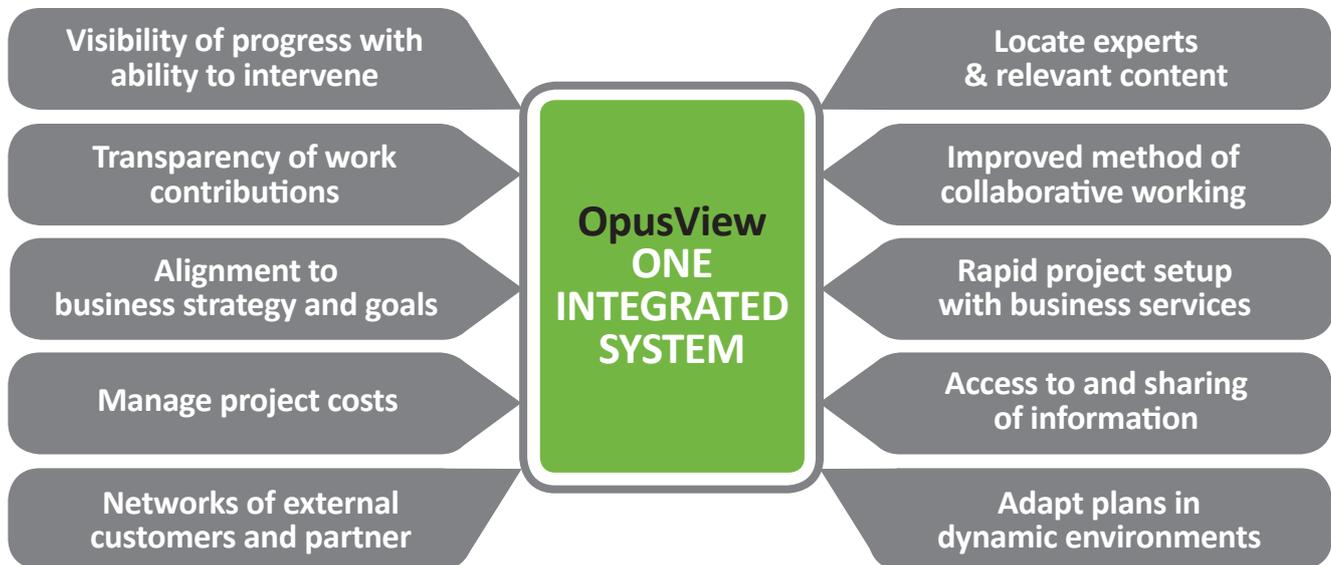

**REDUCE COST - MORE SALES**

**Providing all the productivity,  
management, collaborative and  
social tools in one seamless  
real-time system.**

**ENHANCED PERFORMANCE**

**Best practice services are  
pre-configured for rapid  
project/programme setup.  
Services enable specializations:  
sectors, partners and processes.**

## Feature overview

### Studio

A powerful and easy-to-use builder that allows you to put together everything you need for your collaborative business project. With Studio, business and technical users can create and visualize initiatives from start to finish.

### Project Center

Project Center provides an instant summarized view of Project Rooms giving users the ability to move to any project seamlessly.

### Dashboards

Dashboards clarify performance objectives by presenting key information in real-time about all projects you are involved in. The interactive interface allows users to change the detail level and navigate straight to relevant sections.

### Planner

Use automatically generated interactive calendars and Gantt charts to view tasks and plan activities. Monitor the overall timeline of the project and the expected completion date.

### Resources

Create notes and mind maps, and capture and store web links, videos, and documents. All these resources can be shared, and any activity update is recorded for transparency.

### Mind Maps

An integrated mind mapper can clarify thinking by visually structuring thoughts to understand what's important. Share mind maps to help with business process planning and group working.

### Real-Time Communications

Increase work efficiencies by saving time and sharing information in your collaborative environment using topic based chat, message broadcasting and call conferencing with VOIP.

## Voting and Feedback

Powerful, flexible, and designed to gain an accurate view of people's preferences, real-time voting and feedback systems ensure organizational buy-in and are a great way to increase participation in company-wide projects.

## Sketcher

An integrated canvas editor can convey information visually, advance thinking, and support discussion. Import images and files to help with planning and sharing ideas in real-time.

## Community

Strong community connections are embedded to enable successful relationships whenever there are business initiatives to complete. Users can find out about co-workers' profiles, skills, and expertise, be notified about new initiatives in the enterprise, and access and contribute to project-orientated Wikis and Blogs.

## Sharing

A robust sharing and propagation trail identifies users as creators, owners, sharers, and even group sharers. This lets you leverage your collaborative networks efficiently, whilst also being able to control the progress and completion of a project. All resources and components can be shared with pin-point granularity.

## Search

Managers can quickly identify potential team members by searching for skills and expertise profiles against requirements. Users can search the entire initiatives database for relevant business information. Information assets can be made public to users who can then identify the right content to share and consume.

## To-do Lists

Keep prioritized to-do lists. Activities can be delegated and assigned to co-workers. Vital actions won't get missed, and you and the group will be more productive.

## Team Boards

View project performance, workload of each team member and status of each task. Easily change work schedules to suit priorities.

## Templates

Turn successful, proven project patterns into reusable and repeatable project approaches, or utilize out-of-the-box best practice services.

## Project Costs

Manage projects costs at individual and team levels. Track history of costs and make sure project budgets are adhered to.

## Task Dependencies

Set and view task dependencies and critical paths across your projects. Drill down on tasks that need closer viewing and intervention.
